

Project Progress Report - 4

Name: Jyothi Kadapala

Student ID: 02035892

Git User ID: Jyothi-555

Project: CarKonnnect

What Am I Proud about:

I was able to write code for Login User page where the existing customers can log in to the page by giving their Email and password.

I was able to save this information in firebase. I was also able to add user uid to Google cloud firestore database.

I added Forgot password section to the page where if the user forgets their password a link will be sent to their email address where they can click on that and change their password and comeback to the login page and login with their email and new password and this is stored in firebase.

By adding this users can now be able to login in to the page and the authentication solution that we added gives a seamless and reliable user experience.

Next Steps:

- In the upcoming weeks we want add some more features where we can upload and retrieve options where we can upload and retrieve details of a car with multiple images from firebase.
- And also include more data which will make us give more information to the customers and have more options to choose for them.
