

## **Project Progress Report -3**

**Name:** Jyothi Kadapala

**Student ID:** 02035892

**Git User ID:** Jyothi-555

**Project:** CarKonnnect

### **What Am I Proud about:**

I was able to write HTML and CSS code for few of the sections in Buy page where I included search bar which allows the customer to look for make/model of cars they are looking for and added options which allows them to enter their lowest and maximum budget and to select his choice of age of cars to view and to select his choice of type of cars to view.

Also added Testimonial section from customers where it displays the reviews from them. Made few changes in other pages which we thought would be better.

I also took care of the footer section where the customers can stay connected with the app by subscribing and following us on various online platforms. Want to add few more options to the page in the upcoming weeks.

### **Next Steps:**

- Trying to learn more API's and include more data which will make us give more information to the customers and have more options to choose for them.
